can a pa start their own practice: *False Premise, False Promise* Sally C. Pipes, 2020-01-07 American health care is at a crossroads. Health spending reached \$3.5 trillion in 2017. Yet more than 27 million people remain uninsured. And it's unclear if all that spending is buying higher-quality care. Patients, doctors, insurers, and the government acknowledge that the healthcare status quo is unsustainable. America's last attempt at health reform -- Obamacare -- didn't work. Nearly a decade after its passage in 2010, Democrats are calling for a government takeover of the nation's healthcare system -- Medicare for All. The idea's supporters assert that health care is a right. They promise generous, universal, high-quality care to all Americans, with no referrals, copays, deductibles, or coinsurance. With a sales pitch like that, it's no wonder that seven in ten people now support Medicare for All. Doctors, especially young ones, are coming around to the idea of single-payer, too. Democrats, led by the progressive wing of the party, hope to capitalize on this enthusiasm. In 2017, they introduced companion legislation in the House and Senate that would establish Medicare for All. They have already promised to do the same when the next Congress convenes in 2019. More than 70 House Democrats have joined a new Medicare for All Caucus. Senator Bernie Sanders is effectively already on the presidential campaign trail, making his case for single-payer. If Democrats take the White House and Senate in 2020, and hold onto the House, a Medicare for All bill could be among the first pieces of legislation presented to the new president for a signature. In this book, Sally C. Pipes, a Canadian native, will make the case against Medicare for All. She'll explain why health care is not a right -- and how progressives pressing for single-payer are making a litany of promises they can't possibly keep. Evidence from government-run systems in Canada, the United Kingdom, and other developed countries proves that single-payer forces patients to withstand long waits for poor care at high cost. First, she'll unpack the Medicare for All plans under consideration in Congress. She'll explain how radical they truly are. Medicare for All will not save \$5 trillion, as some of its proponents claim. It will cost about \$32 trillion over 10 years, according to analyses from the Urban Institute and the Mercatus Center. It will outlaw private health insurance. It will raise taxes by trillions of dollars. It will cut pay for doctors to the rates paid by Medicare and thereby exacerbate our nation's shortage of physicians. And it will ration care. Then, Sally will detail the horrors of single-payer. She'll start in Canada, whose single-payer system most closely resembles the one progressives have in mind for the United States. Analyses of the government-run systems in the United Kingdom and a few other developed countries will follow, with particular focus on the problems that these systems pose for patients and doctors. To substantiate her indictment of single-payer, Sally will marshal both quantitative and qualitative evidence. She'll highlight how Americans fare better than their peers in Canada and the

United Kingdom on the health outcomes that are directly linked to the quality of a healthcare system, including survival rates for patients with cancer and cardiovascular issues. She'll also explain why the health outcomes where the United States performs poorly relative to other nations, like infant mortality and life expectancy, tell us little about our healthcare system. Sally will pepper her text with heart-wrenching stories of the human costs of single-payer -- of people who were injured, were forced to remain in pain, or even died because their government-run healthcare system delayed or denied care. Too often, evangelists for free markets limit their arguments to facts and statistics -- and fail to appeal to the public's emotions. Sally will feature the stories of individuals and families who have been victims of single-payer systems. These vignettes will help drive home the truth about single-payer -- and why it must not come to the United States. She'll conclude with her vision for delivering the affordable, accessible, quality care the American people are looking for.

As corporations seek to save money and government agencies aim to increase constituent access, minimum qualifications for the guardians of our nation's healthcare continue to decline—with deadly consequences. This is a story that has not yet been told, and one that has dangerous repercussions for all Americans. With the rate of nurse practitioner and physician assistant graduates exceeding that of physician graduates, if you are not already being treated by a non-physician, chances are, you soon will be. While advocates for these professions insist that research shows that they can provide the same care as physicians, patients do not know the whole truth: that there are no credible scientific studies to support the safety and efficacy of non-physicians practicing without physician supervision. Written by two physicians who have witnessed the decline of medical expertise over the last twenty years, this data-driven book interweaves heart-rending true patient stories with hard data, showing how patients have been sacrificed for profit by the substitution of non-physician practitioners. Adding a dimension neglected by modern healthcare critiques such as *An American Sickness*, this book provides a roadmap for patients to protect themselves from medical harm. WORDS OF PRAISE and REVIEWS Al-Agba and Bernard tell a frightening story that insiders know all too well. As mega corporations push for efficiency and tout consumer focused retail services, American healthcare is being dumbed down to the point of no return. It's a story that many media outlets are missing and one that puts you and your family's health at real risk. --John Irvine, *Deductible Media* Laced with actual patient cases, the book's data and patterns of large corporations replacing physicians with non-physician practitioners, despite the vast difference in training is enlightening and astounding. The authors' extensively researched book methodically lays out the problems of our changing medical care landscape and solutions to ensure quality care. --Marilyn M. Singleton, MD, JD A masterful job of bringing to light a rapidly growing issue of what should be great concern to all of us: the proliferation of non-physician practitioners that work predominantly inside algorithms rather than applying years of training, clinical knowledge, and experience. Instead of a patient-first mentality, we are increasingly met with the sad statement of *Profits Over Patients*, echoed by hospitals and health insurance companies. --John M. Chamberlain, MHA, LFACHE, Board Chairman, *Citizen Health A* must read for patients attempting to navigate today's healthcare marketplace. --Brian Wilhelmi MD, JD, FASA

can a pa start their own practice: Conflict of Interest in Medical Research, Education, and Practice Institute of Medicine, Board on Health Sciences Policy, Committee on Conflict of Interest in Medical Research, Education, and Practice, 2009-09-16 Collaborations of physicians and researchers with industry can provide valuable benefits to society, particularly in the translation of basic scientific discoveries to new therapies and products. Recent reports and news stories have, however, documented disturbing examples of relationships and practices that put at risk the integrity of medical research, the objectivity of professional education, the quality of patient care, the soundness of clinical practice guidelines, and the public's trust in medicine. Conflict of Interest in Medical Research, Education, and Practice provides a comprehensive look at conflict of interest in medicine. It offers principles to inform the design of policies to identify, limit, and manage conflicts of interest without damaging constructive collaboration with industry. It calls for both short-term actions and long-term commitments by institutions and individuals, including leaders of academic medical centers, professional societies, patient advocacy groups, government agencies, and drug, device, and pharmaceutical companies. Failure of the medical community to take convincing action on conflicts of interest invites additional legislative or regulatory measures that may be overly broad or unduly burdensome. Conflict of Interest in Medical Research, Education, and Practice makes several recommendations for strengthening conflict of interest policies and curbing relationships that create risks with little benefit. The book will serve as an invaluable resource for individuals and organizations committed to high ethical standards in all realms of medicine.

At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles-including limits on nurses' scope of practice-should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

The Nurse Practitioner in Urology will be invaluable in ensuring that the nurse practitioner is able to maintain exemplary management of patients with acute and chronic urologic conditions in a wide variety of settings, including independent practices, hospitals, and academic urologic practices. It explains fully the role of the nurse practitioner as a skilled clinician in urology, blending nursing and medical management and capable of managing many chronic nonoperative urologic conditions while recognizing those conditions which may benefit from surgical management.
